## OPERATIONS SECURITY TRUST

[Login](#)

### Mission

Operations Security Trust (or "Ops-T") forum is a highly vetted community of security professionals focused on the operational robustness, integrity, and security of the Internet. The community promotes responsible action against malicious behavior beyond just observation, analysis and research. Ops-T carefully expands membership pulling talent from many other security forums looking for strong vetting with in three areas:

1. sphere of trust;
2. sphere of action;
3. the ability to maintain a "need to know" confidentiality.

Operations Security Trust (or "Ops-T") members are in a position to directly affect Internet security operations in some meaningful way. The community's members span the breadth of the industry including service providers, equipment vendors, financial institutions, mail admins, DNS admins, DNS registrars, content hosting providers, law enforcement organizations/agencies, CSIRT Teams, and third party organizations that provide security-related services for public benefit (e.g. monitoring or filtering service providers). The breadth of membership, along with an action plus trust vetting approach creates a community which would be in a position to apply focused attention on the malleasant behaviors which threaten the Internet.

### Members:

- will be privy to lists of infected IP addresses, compromised accounts, bot c&c lists and other data that should be acted upon.
- are expected to take appropriate action within their domain of control.
- are expected to contribute data as appropriate and in a fashion that does not violate any laws or corporate policies.
